Goal	Knowledge	Outermost symbol
Show for all $x$ , $G(x)$ . Consider arbitrary $\hat{x}$ . Show $G(\hat{x})$	We know for all $x$ , $K(x)$ In particular we know $K(\hat{t})$ for constant $\hat{t}$	$\forall$
Show: exists $x$ s.t. $G(x)$ . We show $G(\hat{t})$	We know exists $x$ s.t. $K(x)$ Let $\hat{x}$ be s.t. $K(x)$	$\exists$
Show $G_1$ iff $G_2$ 1. Show if $G_1$ then $G_2$ 2. Show if $G_2$ then $G_1$	We know $K_1$ iff $K_2$ In particular we know if $K_1$ then $K_2$ and if $K_2$ then $K_1$	$\iff$
Show if $G_1$ then $G_2$ Assume $G_1$ Show $G_2$	We know if $K_1$ then $K_2$ 1. To show $K_2$ it suffices to show $K_2$ 2. Know $K_1$ , Also know $K_2$	$\Rightarrow$
Show $G_1$ and $G_2$ 1. Show $G_1$ 2. Show $G_2$	Know $K_1$ and $K_2$ 1. Also Know $K_1$ 2. Also Know $K_2$	$\wedge$
Show $G_1$ or $G_2$ 1. Assume $\neg G_1$ , show $G_2$ 2. Assume $\neg G_2$ , show $G_1$	We know $K_1$ or $K_2$ . Show $G$ . 1. Assume $K_1$ , Show $G$ 2. Assume $K_2$ , Show $G$ Case split $\uparrow$	$\vee$
Move Negation Inside, as far as possible		$\neg$

## 0.1 Lattices and Fixpoints

We begin by defining relations and their properties.

Definition 1. A binary relation  $R$  on a set  $A$  is a subset  $R \subset A \times A$ .

The relation  $R$  is reflexive if for all  $x$  in  $A$ , we have  $R(x,x)$ .

The relation  $R$  is Antisymmetric if for all  $x$  and  $y$  in  $A$ , if  $R(x,y)$  and  $R(y,x)$  then  $x = y$ .

The relation  $R$  is transitive if for all  $x,y$  and  $z$  in  $A$ , if  $R(x,y)$  and  $R(y,z)$  then  $R(x,z)$ .

The relation  $R$  is a partial order if  $R$  is reflexive, antisymmetric and transitive.

A Poset  $(A, \sqsubseteq)$  is a set  $A$  and a partial order  $\sqsubseteq$  on  $A$ .

Example 1. The pair  $(\mathbb{N}, \leq)$  where  $\mathbb{N}$  is the set of natural numbers, is a poset.

For every set  $B$ , we have  $(\mathcal{P}(B), \subseteq)$  where  $\mathcal{P}(B)$  is the powerset of  $B$ , is a poset.

Definition 2. • Let  $(A, \sqsubseteq)$  be a poset. A function  $F$  from  $A$  to  $A$  is monotone (order-preserving, homomorphism) if for all  $x$  and  $y$  in  $A$ , if  $x \sqsubseteq y$ , then  $F(x) \sqsubseteq F(y)$ .

- $F$  has a fixpoint  $x$  in  $A$  if there exists  $x$  in  $A$  such that  $F(x) = x$ .

- $x$  in  $A$  is a pre-fixpoint of  $F$  if  $x \sqsubseteq F(x)$  and is a post-fixpoint of  $F$ , if  $F(x) \sqsubseteq x$ .

Definition 3. Let  $(A, \sqsubseteq)$  be a poset.

- $x$  in  $A$  is an upper bound(lower bound) on a subset  $B$  of  $A$  if for all  $y$  in  $B$ , it holds that  $y \sqsubseteq x$  ( $x \sqsubseteq y$ ).
- $x$  is the least upper bound of  $B$  if (i)  $x$  is an upper bound of  $B$  and (ii) for all upper bounds  $y$  of  $B$ , we have  $x \sqsubseteq y$ . We denote such  $x$  by  $\sqcup B$ .
- $x$  is the greatest lower bound of  $B$  if (i)  $x$  is a lower bound of  $B$  and (ii) for all lower bounds  $y$  of  $B$ , we have  $y \sqsubseteq x$ . We denote such  $x$  by  $\sqcap B$ .

Example 2. • Consider the poset  $(\mathbb{N}, \leq)$ . Then for any  $B \subseteq \mathbb{N}$ , if  $B$  is finite,  $\sqcup B$  is well-defined and equal to  $\max B$ . If  $B$  is infinite, then  $\sqcup B$  does not exist.

- Consider the poset  $(\mathbb{N} \cup \{\infty\}, \leq)$  where for all  $x$  in  $\mathbb{N}$ , it holds that  $x \leq \infty$ . Then for all  $B \subseteq \mathbb{N}$ , the least upper bound  $\sqcup B$  is well-defined.
- Let  $A$  be any set and consider the poset  $(\mathcal{P}(A), \subseteq)$ . For any subset  $B$  of  $\mathcal{P}(A)$ , it holds that  $\sqcup B = \bigcup B$  and  $\sqcap B = \bigcap B$ .

Definition 4. Poset  $(A, \sqsubseteq)$  is a complete-lattice if for all  $B \subseteq A$ , both  $\sqcap B$  and  $\sqcup B$  exist.

Example 3. Let  $(A, \sqsubseteq)$  be a complete-lattice.

- $\sqcup A = \top$
- $\sqcap A = \perp$
- $\sqcup \emptyset = \perp$
- $\sqcap \emptyset = \top$

Theorem 1 (Knaster-Tarski). For every complete lattice  $(A, \sqsubseteq)$  and monotone function  $F$  on  $A$ , it holds that

1.  $\sqcup \{x \in A \mid x \sqsubseteq F(x)\}$  is the unique greatest fixpoint of  $F$ .
2.  $\sqcap \{x \in A \mid F(x) \sqsubseteq x\}$  is the unique least fixpoint of  $F$ .

Homework. Prove the Knaster Tarski Theorem.
